

Festoon Product information

BS7671:2008 : 740.55.1.1

Every luminaire and decorative lighting chain shall have a suitable IP rating, be installed so as not to impair its ingress protection, and be securely attached to the structure or support intended to carry it. Its weight shall not be carried by the supply cable.

Note: Lighting chains may be used in any length provided the overcurrent protective device in the circuit is properly rated and the conductor rating is not exceeded. 2.5mm 2core rated at 18amp maximum.

Type	Maximum Wattage
LED	30W
CFL	30W
Halogen	40W
Golf Ball	40W
GLS	60W

Cable Type: HO5VVH2-F 2.5mm

Lamp Holder material: Polycarbonate

We highly recommend the use of low energy lamps, including but not limited to LED and fluorescent/CFL.

Caution must be advised when using filament/traditional GLS, higher wattage and golf ball type lamps. This is due to inevitably higher loadings on the conductors and also undue heat and stress passed through to the polycarbonate lamp holder. Please note, the use of Golf Ball type lamps in particular do not allow for efficient heat dissipation due to their size and therefore do not exceed the values stated above.
